

# Image Rotator/Resizer

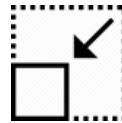

## Rotate and/or Resize images within file attachment fields

Uploading images to your Quick Base application can be challenging. Quite often these images wind up way too big and are also rotated in such a way that it makes them difficult to manage. Our custom integration takes the photos, resizes them to a specified height and width and can also rotate them to their proper upright position.

**Rotating** images is done in degrees (90°, 180°, 270°) and can be done individually or you can rotate all images in the same record with one button click!

**Resizing** images is as simple as a click of a button. Simply upload your image into a file attachment field, save the record and click the Resize Image Button. Images are resized to a pre-configured height and width.
